

Cir-clips for Needle Roller Bearings

Features

IKO Cir-clips for Needle Roller Bearings have been specially designed for needle roller bearings on which, in many cases, generally available Cir-clips cannot be used. They have a low sectional height and are very rigid. They are made of spring steel. There are Cir-clips for shafts and for bores, and they are used for positioning to prevent bearing movement in the axial direction.

Types

Cir-clips for Needle Roller Bearings are available as shown in Table. 1.

Table 1 Type of Cir-clip

Type	For shaft	For bore
Shape		
Model code	WR	AR

Identification number

The identification number of Cir-clips consists of a model code and a size as shown below.

Allowable Rotational Speed

Cir-clips for Needle Roller Bearings are fixed in the groove with a certain amount of pressure on the bottom of the groove. In the case of Cir-clips for shaft WR type, the centrifugal force causes a decrease in the gripping pressure. Therefore, when using them at high rotational speeds, it is necessary to first check the allowable rotational speed shown in Fig.1.

Mounting

The mounting dimensions for Cir-clips for Needle Roller Bearings are shown in the dimension table. When using these Cir-clips to restrict the movement of the needle roller cage in the axial direction, it is recommended that a spacer be used between the Cir-clip and the cage. Spacers are not required at low rotational speeds.

When it is difficult to reach Cir-clips with dismantling tools and disassembly is difficult, or when the frequency of dismantling is high, it is necessary to consider the use of a retaining ring (JIS B 2804), although they have a higher sectional height.
