IK Features of Special Environment Linear Way and Linear Roller Way 1 **IK**'s unique ideas and experiences special environment applications.

IKO Linear Way and Linear Roller Way are available for various special environment by using different materials and grease, surface treatment and dust protection measures, etc. Typical application fields and major countermeasures are described below.

Clean Environment

When the Linear Way or Linear Roller Way is used in clean environment such as a clean room, it is required that the environment is not polluted by dust-generation by the Linear Way or Linear Roller Way and it must have excellent rust prevention property as rust prevention oil cannot be used.

Vacuum Environment

When the Linear Way or Linear Roller Way is used in vacuum environment, it is required that the gas discharged from the Linear Way or Linear Roller Way does not pollute the environment or reduce the degree of vacuum, and it must have excellent rust prevention property as rust prevention oil cannot be used.

Heat Resistance Measures

When the Linear Way is used in an environment where temperature is higher than usual, heat resistance of synthetic resin components and metal parts will be an issue.

Dust Protection

If dust such as metal or wooden chips get into the way of the Linear Way or Linear Roller Way, reduction of life and accuracy may be caused. Therefore, measures to prevent foreign substances from entering into the way are necessary.

Spatter Protection

Spatter of welding, etc. is so hot that it adheres to further components. Foreign substances adhering to the track rail firmly cannot be fully removed by normal dust protection measures, so measures to avoid adherence and enhanced foreign substances removal measures are necessary.

Clean

- CLCL Linear Way and Linear Roller Way

Special specification corresponding to special environment by combination of linear motion rolling guide series.

LCL Linear Way and Linear Roller Way

Neither grease nor oil

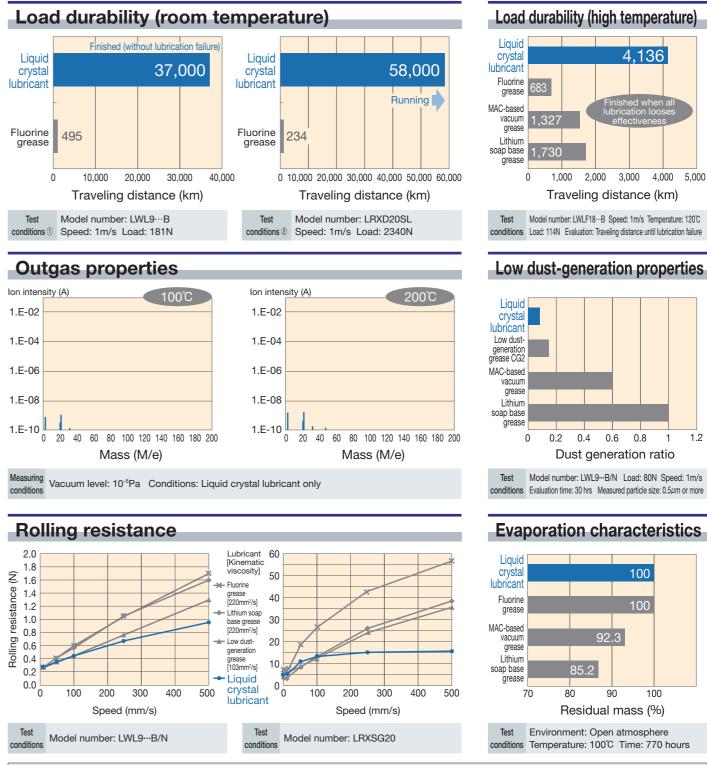

World's first Liquid Crystal Lubricant

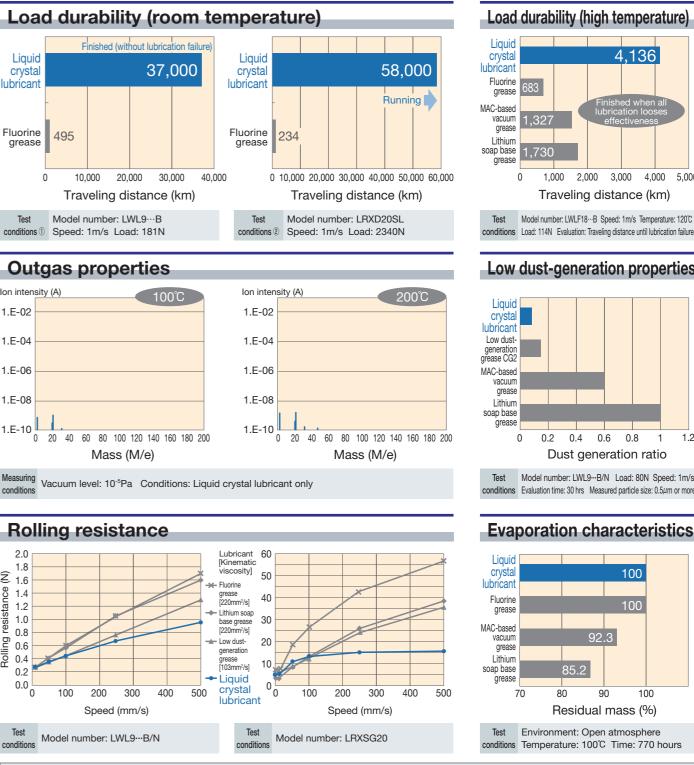

Liquid Crystal Lubricants are completely different from greases composed of base oils and thickeners. Liquid Crystal Lubricants are composed only of liquid crystal compounds, forming a new type of lubricant never seen before. Conventional grease base oils lubricate using dissimilar molecules. causing difficulties with adhesion to metal surfaces and evaporation. Liquid Crystal Lubricant forms molecular aggregates, improving adhesion to metal surfaces and minimizing evaporation. The Liquid Crystal Lubricant used in the LCL Linear Way and Linear Roller Way is the world's first Liquid Crystal Lubricant for bearings, achieving excellent lubrication functionality even under high contact pressure during rolling contact and successfully creating revolutionary new functions.

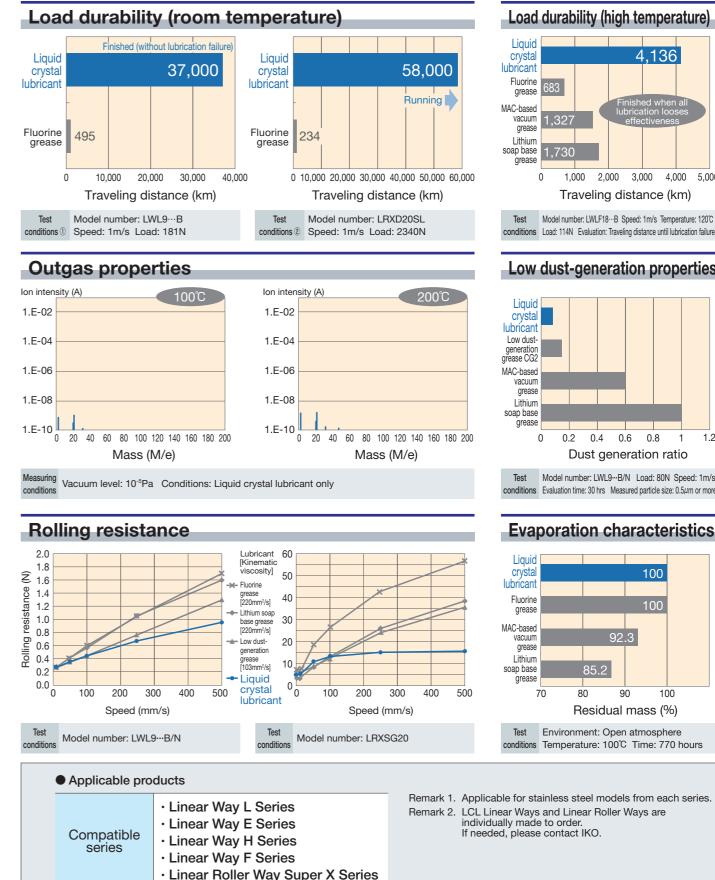

and a seller

Performance

Features

Superior load durability

Long-term durability exceeds 70 times that of fluorine grease at room temperature and atmospheric pressure.

2 to 6 times greater durability than other types of grease, even in high-temperature environments.

Superior low dust-generation properties

Dust generation is less than 1/10 of lithium soap based grease.

Excellent outgas properties

The outgassing characteristics in high vacuum environments show excellent performance even even at high temperatures.

Minimizes Inbricant evaporation

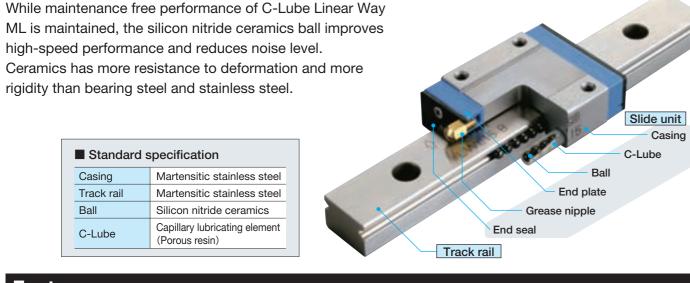

Zero mass loss even at 100°C. Liquid crystal lubricants have no loss due to evaporation.

Light and smooth sliding

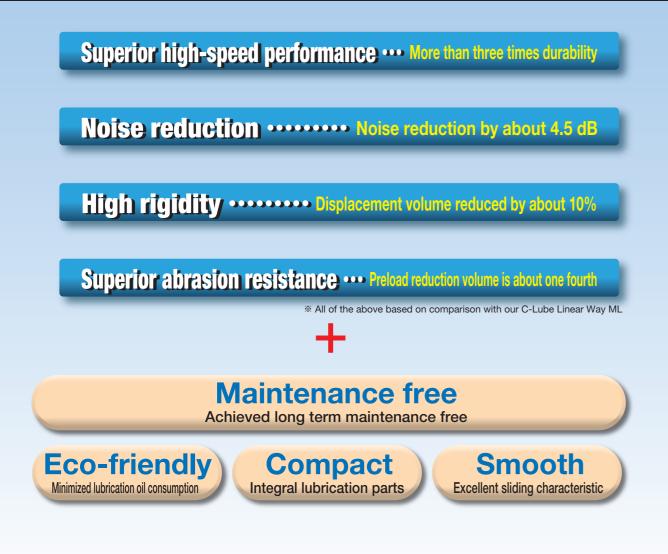

The rolling resistance is lower than that of fluorine grease or lithium soap-based grease.

Non-magnetic stainless Linear Roller Way Super X

The non-magnetic stainless Linear Roller Way Super X is the world's first non-magnetic stainless steel endless motion roller type linear motion rolling guide to attain relative magnetic permeability of 1.01 or less. This is accomplished through the dedicated development of silicon nitride ceramic cylindrical rollers and non-magnetic stainless steel casings and track rails. Despite being non-magnetic material it still maintains the superior vibration characteristics, excellent running accuracy, and friction characteristics provided by the Linear Roller Way Super X. This allows for accurate and rapid positioning in environments affected by minimal magnetism.

The world's first non-magnetic roller type with relative magnetic permeability of

Features

World first for roller types

The first non-magnetic specifications ever realized in the world for endless motion roller type linear motion rolling guides

Relative magnetic permeability 1.01 or less

Allows for accurate and rapid positioning in environments affected by minimal magnetism

High corrosion resistance

Optimal for use in clean environment thanks to non-magnetic stainless steel

High running accuracy

The superb vibration characteristics of roller type linear motion rolling guides allow superior running accuracy

Non-magnetic stainless steel characteristics

Material name Characteristics	Non-magnetic stainless steel	Silicon nitride ceramics
Relative magnetic permeability ()	1.01 or less (1.005)	1 (0.999991)
Electric conductivity	0	×
Hardness (HV)	380~450	1400~1600
Linear expansion coefficient (×10 ⁻⁶ /°C)	19.0 (20~400°C)	3.2 (20∼400°C)
Specific gravity (g/cm)	7.9	3.2
Main ingredients	Fe, Mn, Cr	Si ₃ N ₄
Cost	0	\bigtriangleup
Remarks	_	Good corrosion resistance

Note(1) () is only an example of the measurement value.

Selection of lubricant

By setting appropriate lubricants such as vacuum grease and low dust-generating grease, any operating environment can be supported.

IKD Features of Special Environment Linear Way and Linear Roller Way (5)

High-speed specification Linear Way

Components include silicon nitride ceramic balls and stainless steel end plates. Special heat treatment and machining are applied to the unit to achieve excellent durability during high-speed operation.

Slide unit Casing Ball End plate

Features

Superior high-speed durability

Track rail

Over 5 times more durable than the conventional high-speed type Linear Way when operated at the maximum speed exceeding 360m/min.

Easily interchangeable

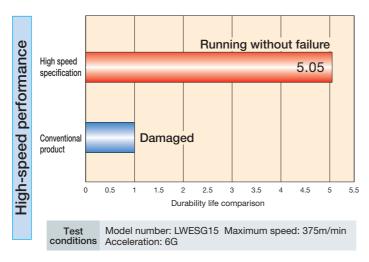

Since the dimensions of each component are the same as the standard product, no additional machining is required for mounting. In addition, there is no contact or interference with other components.

Superior low dust-generation properties

Changing the lubricant from grease to liquid crystal lubricant (see page I -35) can improve low dust-generation properties.

Performance

More than five times more durable

Main component materials

Casing	High carbon steel	
End plate	Stainless steel	
Track rail Stainless steel		
Ball	Silicon nitride ceramics	
Grease	Lithium soap-based grease *Can be changed to liquid crystal lubricant with lower dust generation.	

Remark 1. For detailed specifications or manufacturing information, please contact IKO.

IKD Features of Special Environment Linear Way and Linear Roller Way 6

Precision cleaning and clean packaging specifications

Suitable for assembly, inspection, and packaging in precision cleaning and cleanliness-controlled environments. Operation is performed under an ISO 14644-1 (Cleanliness Class 6) environment, which is suitable for packaging products used in clean environments and high-vacuum environment facilities. Effective when used with our stainless steel products with high rust prevention capability (page I-43) and our liquid crystal lubricants with superior low dust-generation properties (page I-35).

Features

Supports all processes from assembly to

packaging in a clean

environment!

High level of cleanliness

Supports operations in a clean environment that complies with ISO standards. Since assembly, inspection, and packaging are all performed in the same clean room, there is no risk of contamination between processes, resulting in a high level of cleanliness.

Various packaging options

We use special packaging materials that generate less dust. We can also provide special packaging to meet your specific requirements. Contact IKO for more information.

Simplified receiving process

Since products are packaged in a clean environment, additional cleaning is not required. After unpacking, the products can be mounted directly into the equipment used in a vacuum environment.

unpacking.

Performance

· After precision cleaning of ea	ch
part, assembly, inspection, ar	۱d
packaging are performed in a	L
clean room.	
	_

- Products are double-packaged using special packaging bags. Oxvgen absorbers can be prepacked if necessary.
- · Prepacked grease can be selected from clean environment/vacuum lubricant and liquid crystal lubricant.
- Rust prevention oil is not applied after cleaning.

Remark 1. For detailed specifications or manufacturing information, please contact IKO. Remark 2. Some types of grease and lubricant cannot be sealed in a clean room. Remark 3. Since rust prevention oil is not applied, please mount products into the equipment immediately after

Stainless Linear Way and Linear Roller Way

A variety of stainless steel series

IKO Linear Way and Linear Roller Way lineup include products with stainless steel made parts instead of steel parts. As stainless steel is resistant to rust relative to high carbon steel made products, they are optimal for use in applications where oil and rust prevention oil are not preferred.

It is also suitable for use in cleanroom environment room, so use IKO clean grease that inhibits dust-generation amount together.

Special specification for special environment

IKO Linear Way and Linear Roller Way lineup include following special specifications to correspond to various special environments.

Dust protection

Inner seal

C-Wiper /RC

A lubricated C-Wiper can be installed on the outside of the end seal. It can be used for a long period of time because it enhances the dustproof effect and suppresses the increase in frictional resistance even in harsh environments where dust, chips, cutting fluid, etc. are present. End seal, inner seal (/UR) and scraper (/Z) may be equipped as standard when you specify special specification /RC with C-Wiper. If you need inner seal only, specify /UR. End seal

Special specification for special environment

Dust protection

Rail cover sheet

Rail cover sheet that consists of steel plate and adhesive tape and fastened to the dedicated track rail with groove on the track rail prevents foreign substances from entering into the slide unit.

Rail cover plate totally covers the upper surface of the track

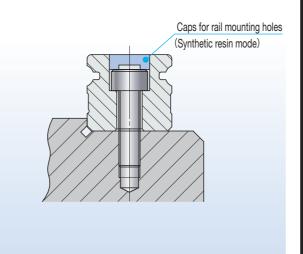

rail to prevent foreign substances from entering into the track

Rail cover plate /PS

Caps for rail mounting holes /F

Caps for rail mounting holes close the track rail mounting holes to prevent foreign substances from entering into the slide unit.

Contact IKO for aluminum alloy caps for rail mounting holes.

Female threads for bellows /J

Female threads for bellows

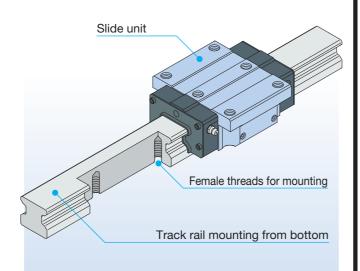

Female threads for bellows are prepared on the slide unit and track rail ends.

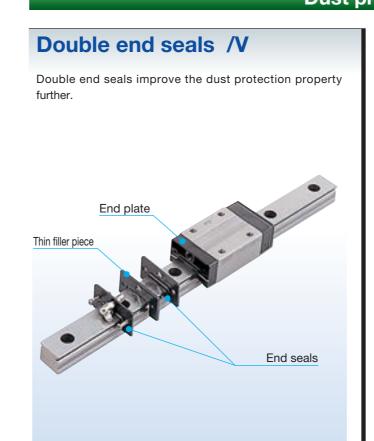

Female threads for bellows

Track rail mounting from bottom

This is the specification that track rail is fixed from the mounting surface side. As there are no mounting holes on the track rail upper surface, adherence with the seal is superior and better dust protection effect is achieved.

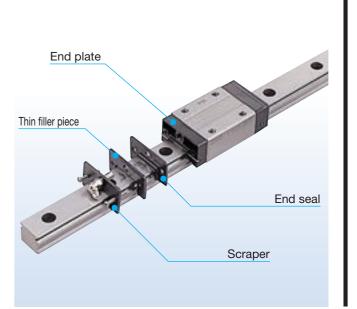

rail.

Dust protection

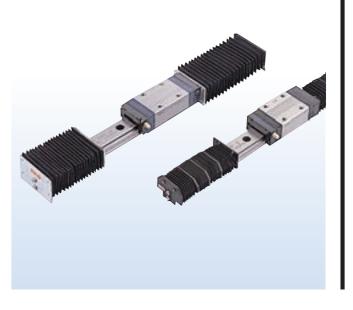

Scraper /Z

Mounted to the outside of end seal, it may remove large foreign substances adhering to the track rail.

Specific bellows

Dust protection cover over the exposed part of the track rail.

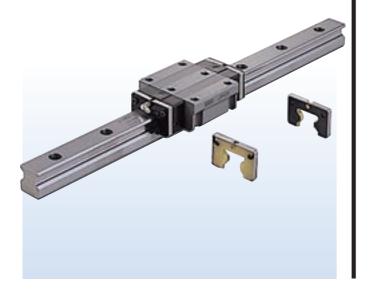

Special specification for special environment

Lubrication

With C-Lube plate /Q

Lubrication parts to substantially reduce the need for lubrication management, i.e. grease job.

Low Dust-Generation Grease for Clean Environment CGL /YCL

For this grease, mixed soap is used as thickener and synthetic oil and low pour point mineral oil are mixed with base oil, so it has excellent low dust generating performance, rolling resistance, lubrication, and rust prevention property.

Bellows cartridge (80 g) JG80 /CGL

With miniature greaser (2.5 ml) MG2.5B /CGL

8841

Low Dust-Generation Grease for Clean Environment CG2 /YCG

For this grease, urea is used as thickener and synthetic oil is used as base oil, so it has excellent low dust generating performance, operating temperature range, lubrication property, rust prevention property and oxidation stability.

Bellows cartridge (80 g) JG80 /CG2

With miniature greaser (2.5 ml) MG2.5B /CG2

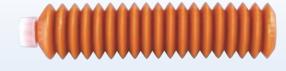

MG10 /CG2 with 10 ml are also available.

Anti-Fretting Corrosion Grease AF2 /YAF

Grease with excellent fretting-proof corrosion property.

Bellows cartridge (80 g) JG80 /AF2

With miniature greaser (2.5 ml) MG2.5B /AF2

Other special grease

For special grease for vacuum or high temperature, please contact IKO.

<section-header><text>

IKD can offer products for special environment!

Others

Special environment seal /RE

The end and under seals are replaced with end seals for special environment that can be used at high temperatures. When it is used in high temperature environment, stainless steel end plate (/BS) and high temperature grease should be combined.

The photo shows a combination of special environment seal (/RE) and stainless steel end plate (/BS).

If needed, please contact IKO.
